

## Connector block assembly

Recommended

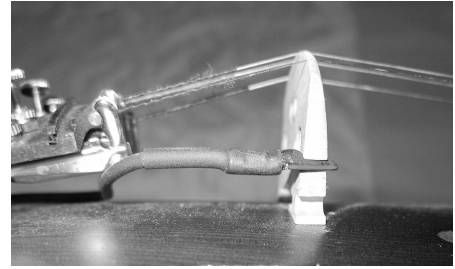

avoid

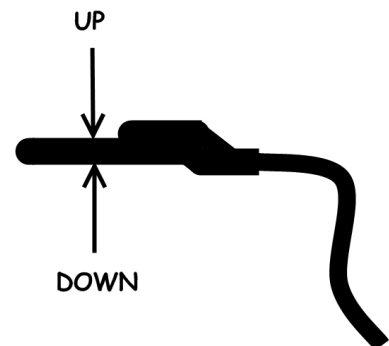

Never pull the cable or handle the sensor by its cable

**PICKUP MUST BE SETUP BY A PROFESSIONAL**

It will be necessary to watch quite particularly the parallelism of surfaces in contact. The pickup has to, during placement, force enough. Beware to not break the auricle during that operation. If the sensor is too loose and does not force enough, it can be tighten up with a thin piece of wood (or cardboard) on it top

Sensor orientation  
***E side string***  
preferably

The AMEKA Pickup will work with any preamp system.  
(a DI Box for example will be fine)
